

Additional Risk Minimisation Measures

Additional Risk Minimisation Measures are intended to promote the safe and effective use of the medicinal product, focusing on specific safety concerns and describe concisely what actions are required to prevent and minimise the risks. Educational materials may be intended for healthcare professionals and patients.

Direct Healthcare Professional Communication letters are to provide timely information to healthcare professionals when new important safety information about a medicine has been obtained.

Educational Materials of additional risk minimisation measures are available in the Register of Medicinal Products only in Estonian (www.ravimiregister.ee > OTSI RAVIMIT).

To see detailed information of medicinal product click on the name of medicinal product
